

WIRELESS VOICE AND MESSAGING SOLUTIONS FOR LOGISTICS AND WAREHOUSING

Being able to communicate effectively from anywhere around a workplace delivers many benefits, including improved staff productivity, reduced costs and higher levels of staff safety.

Key staff can carry a single, portable device that is not only a cordless telephone, but can also receive urgent text messages and can even be used to raise the alarm in the event of an emergency. A range of solutions are available that suit a variety of sites, from major distribution centres through to small warehouses.

MOBILITY HAS MANY REWARDS

For supervisors, forklift operators and security staff to be able to carry their telephone extension with them throughout their site has many tangible benefits.

Key staff can be located quickly via their cordless phone and warehouse workers can be instantly alerted via group text message to their phones that a shipment needs to be loaded or unloaded. Being contactable while on the move improves staff efficiency and as all internal calls on site are free, costs can be significantly reduced.

DELIVERING MESSAGES HAS NEVER BEEN SIMPLER

Integrated text messaging capability provides much more functionality than just wireless voice communications. By interfacing with an almost unlimited choice of security systems, paging and LAN based messaging systems, the cordless system becomes a truly integrated wireless solution for warehouses and distribution centres.

Access control alarms and fire panels can all be integrated to generate messages for dispatch to cordless handsets, pagers or audible alarms. Text messages can be sent to individuals or groups of cordless handsets.

PROTECT YOUR MOST IMPORTANT ASSET

Many logistics workers are required to work in environments where their personal safety is at risk. Cordless handsets with duress functionality ensures that the alarm is raised if urgent assistance is required.

With features such as alarm button, rip cord, man down and location identification, duress handsets deliver peace of mind to users and also enables employers to meet their OH&S obligations.
