

UD9004 Reference Universal HD Player

The moment that the Blu-ray standard became fully specified was also the moment for Marantz to give the green light to its engineers to create the ultimate-quality Blu-ray and SACD player!

The result is the flagship UD9004: a Reference standard Blu-ray Player.

The UD9004 incorporates Silicon's Realta Optix HQV 10-bit processing technology, derived from professional broadcast systems, with no less than 10 technologies for a breathtaking picture from both DVD and Blu-ray. It also has a whole host of state-of-the-art features to reproduce exceptional quality audio – as you would expect from a Marantz player. It includes a heavy multi-layer copper-plated chassis, as well as an audio-exclusive power supply with encased Toroidal transformer and customised capacitors. To avoid any cross talk to the main front channels, dedicated boards are used in the XLR outputs, the main cinch outputs, and the left over channels. Four separate audio boards are used in total, with only the best components used.

Combining these components with Marantz's HDAM-SA2 outputs and endless fine-tuning gives this player a tremendously spacious, lively and tonally well balanced sound. Dual HDMI outputs provide the possibility of sending a dedicated video, as well as a dedicated audio signal to their output source, thus minimising the deleterious effect and with less processing, reducing the signal degradation.

Be prepared for an exceptional audio-visual experience – with the exceptional Marantz UD9004!
