To Whom It May Concern

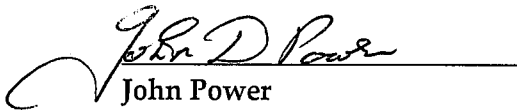

Mercury Engineering have employed PMPS in respect of our planning and scheduling requirements on some of our sites over the past number of years. We have always found that they perform the tasks allocated in a timely and efficient manner while the end-product has always been approved by our Clients and satisfactory for our needs.

The PMPS work has proved to be able to withstand any forensic analysis which it undergoes upon receipt by our Clients. Their recommendations in relation to existing schedule improvements also prove to have been well thought out and functional and when implemented immediately show the benefits of having followed their advice.

The Works involved both Mechanical and Electrical Engineering activities and their grasp of the technical elements of these has assisted us greatly in formulating and drafting well thought out schedules.

We have no hesitation in recommending their services to any prospective Client who may be intending to outsource the 'Planning and Scheduling' functions. They should find in PMPS an able and professional alternative to any in-house capability which may no longer be available to such a client.

Yours faithfully,

John Power
Mercury Engineering
