

Project: Burbank Wall

CMU Wall Strengthening

Location: Burbank, CA 

Description of Work

CMU Masonry wall sections at the Schlegel Studios in Burbank, CA required shear reinforcement as part of a renovation plan to restore the building back to operation after suffering from a fire.

The Tyfo[®] SCH-41S system, a carbon-base composite with aramid cross fibers, was utilized along the interior and exterior faces of the walls providing the shear strengthening required.

Fibrwrap[®] Construction was able to mobilize quickly and complete the project in less than a week. The Tyfo[®] Fibrwrap[®] Systems is a superior technology that results in time savings, reduced remedial costs, and shutdown time.
