

TASI Group completes the acquisition of Litre Meter

Addition of Litre Meter strengthens TASI Flow platform in worldwide Oil & Gas markets

Cleves, Ohio, January 11, 2011

The TASI Group today announced the acquisition of Litre Meter, a fluid meter manufacturing company located in North Marston, Buckinghamshire, near London England.

With this acquisition, the TASI Group adds a significant capability in low flow chemical injection flow metering technology to its Flow platform portfolio.

Litre Meter pioneered the development of the Pelton wheel flowmeter: an accurate, effective and versatile design suitable for many different fluids including acids, chemicals, fuels, water and hot fats, at both high and low flow rates. They have also developed the VFF meter for low flow and high pressure applications for the offshore industry. Their expertise in extremely low flow, high pressure applications with aggressive fluids has made them a leader in the up-stream Oil & Gas recovery industry.

“Litre Meter specializes in the design, manufacture and supply of flow meters; most of which are supplied to the Oil & Gas industry. The VFF rotary piston positive displacement is mainly used for chemical injection where its range of unique features makes it the most desirable chemical injection meter in the world.”

Litre Meter joins the growing TASI Flow Platform, whose companies include AW-Lake Company of Franksville WI, Exact Dispensing of Newcastle ME, and Küppers Elektromechnik GmbH (KEM) of Karlsfeld Germany.

In addition to the Flow Platform, TASI Group is comprised of a Test & Measurement platform which includes Cincinnati Test Systems (CTS) of Cleves OH, and Air Logic Power Systems (ALPS) of Milwaukee WI, as well as an Assembly Platform which includes ATC Automation of Cookeville TN.

About TASI Group

The TASI Group of Companies is comprised of three technologically advanced product platforms commonly linked by a disciplined focus on Test, Measurement, and Assembly. Each TASI company delivers world class products and services, focusing on our global customer needs in diverse market segments. Markets include: Automotive, Medical Devices, Oil and Gas, Plastic Containers, Consumer and General Industrial. TASI provides test, measurement, and assembly solutions which improve processes and bring value-added results vital in today's world manufacturing environments.
